

# Updating from Kodi 16 to Kodi 17.3

1. At Amazon home screen go to settings then to **Applications**. Scroll down to **Manage Installed Applications**. Scroll down and click on **Kodi** and **clear data**.
2. Launch Kodi.
3. Go to System then **File Manager**. Click on Add Source, click on None.
4. Enter <http://chrimerica.net> and click done. Then name it **chrimerica** at bottom.
5. Now back out to main Kodi screen, and go to **System** then **Settings** and then click on **Add-ons**.
6. Click on **Install from Zip**
7. Now click on **program.plugin.chrimerica-3.1.zip**
8. Wait for popup that says **Chrimerica Wizard Installed**
9. You will receive another popup with a list, just hit continue.
10. You will be greeted with yet another popup just dismiss it.
11. Now go back to Kodi main screen and click on **Programs** then **Program Addons**.
12. Click on **Chrimerica Wizard**
13. Then go to **APK Installer**, and click on **Kodi 17.3**, and install. When it's done launch Kodi.
14. Go to **Add-ons**, then **Program Add-ons** and click on **Chrimerica Wizard**.
15. Go to **Builds Menu** and select either Chrimerica Regular 17 or Chrimerica Adult 17, and do fresh install.
16. Wait for it to finish and select **Force Close**, then re-launch Kodi
